Overall Performance

Overall Score	75.92/100
Grade	B
Evaluation	Good

Student Transcript

Good morning, you all. Today I am going to explain the concept of artificial Indian Ocean. I am only known as an artificial Indian Ocean is a branch of computer science that focus on creating missions on software capable performing task that normally requires human intelligence. We start in groups learning from experience, understanding, natural language, solving problem, recognizing image and speech making vision and adopting to use the situation. Artificial intelligence works by combating algorithm, larger amount of data and powerful computing system. A.A. System analysis data, identify pattern and make prediction or decision based on the information that they have learned. Unlike traditional computer programs that follow the fixed generation, a system can improve their performance over the time through learning and experience, one of the most important branch of artificial intelligence is mission learning. Mission learning enables a computer to learn automatic from data without being an expressive program to younger and modern branches,

learning which is useful artificial neural network inspired by structure of human brain. Deep learning is widely used in a master of navigation speech recognition, language, translational automation vehicle, artificial intelligence has become an essential part of daily with life. Virtual assistant like Siri, Google assistant and Alexa uses a to understand why commands and provides useful responses. Streaming with platforms such as Netflix and YouTube, recommends moves and the voice based on user performance online software, updates, user-seal recommended products and personalized customer experience. Thank you, the CA2D tech, the Fernland with Transactions which hospitals use as a to assist doctor in a agnozishing basis and analyzing medical images. In education, extra-A helps students through personalized learning platform intelligent to a tutorial system and automatic assessments. In transportation, AA, power self-driving, traffic management system and routine route optimization. AA is also widely used in agriculture management, cybersecurity, robotics, finance, and scientific research to improve productivity and efficiency. All through artificial intelligence offers many advantages. It also be a certain challenges, concerts such as AWS and security, and validation making job development. Due to automatic the careers in AA system needs to be carefully addressed, responsible development and proper recognition are important to ensure that AA benefits socially, while minimizing the potential risk. In conclusion, AA is a transformer, the world by making systems more faster and more efficient. It helps automate the risk, repetitive tasks, improved station making, increased productivity and support innovation across many industries. As a technology continues to evolve artificial intelligence, while we play and even get role in shaping the future of healthcare education, business, transportation and everyday life. Thank you.

Semantic Analysis

Metric	Result
Similarity Score	67.03%
Understanding	Basic Understanding
Confidence	Low

Audio Analysis

Metric	Value
Duration	211.75 sec
Word Count	433
Words Per Minute	123
Pause Ratio	7.98 %
Voice Energy	0.1014
Filler Words	1

Overall AI Evaluation

Overall Score	75.92/100
Grade	B
Recommendation	Good

AI Summary

The student's explanation achieved a semantic similarity score of **67.03%** with an overall grade of **B**. The explanation demonstrates **Basic Understanding** and the speaking quality was evaluated as **Good**.

Strengths

✓ Shows initial understanding.

Areas for Improvement

- Review the topic.
- Explain concepts step-by-step.
- Include definitions and examples.

AI Recommendation

AI Recommendation
Good

Voice-Based Concept Understanding Analyser

AI-Powered Student Concept Evaluation System
